

Create react app using npx

1. Open VSCode

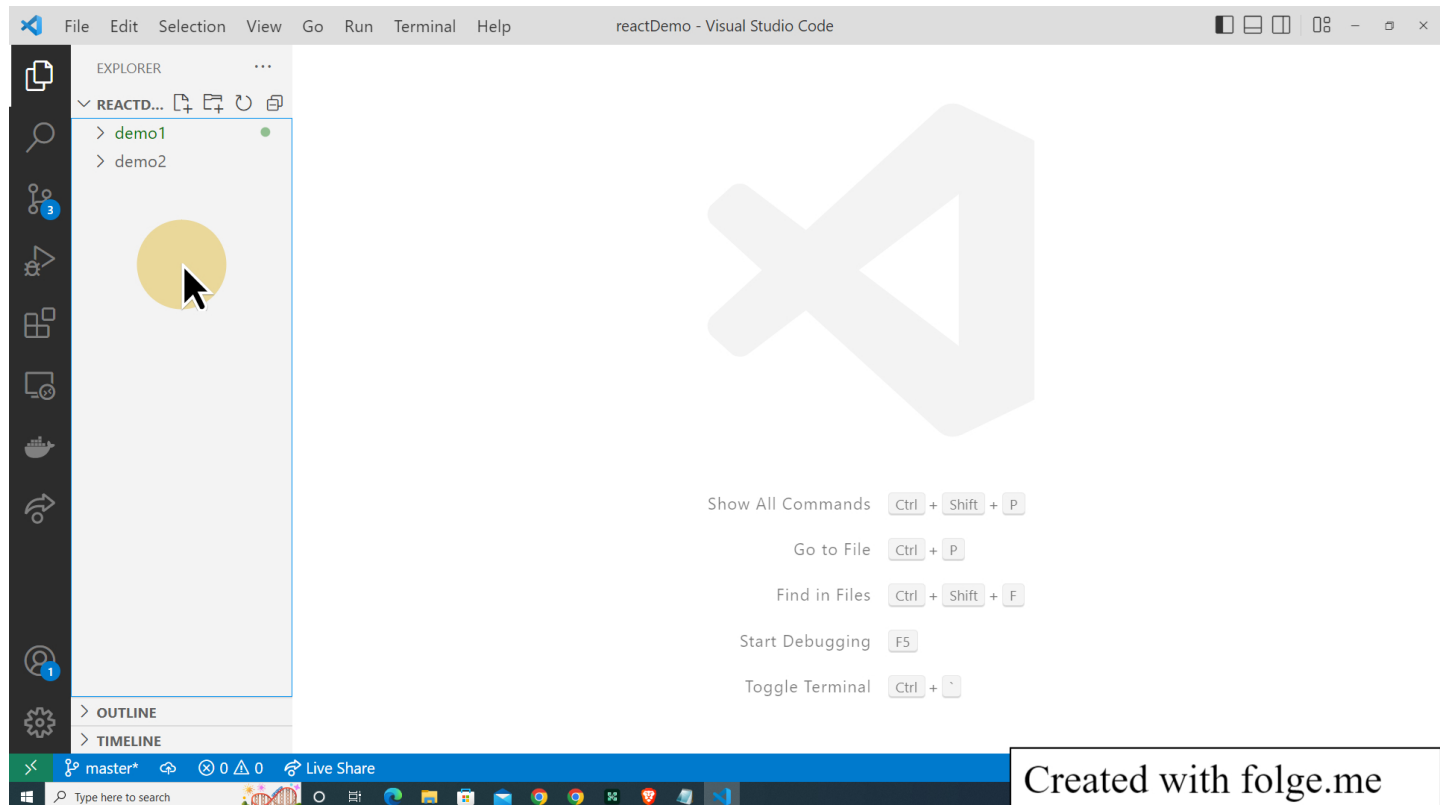

Use VSCode to create react app.

Created with folge.me

2. Select/Create folder

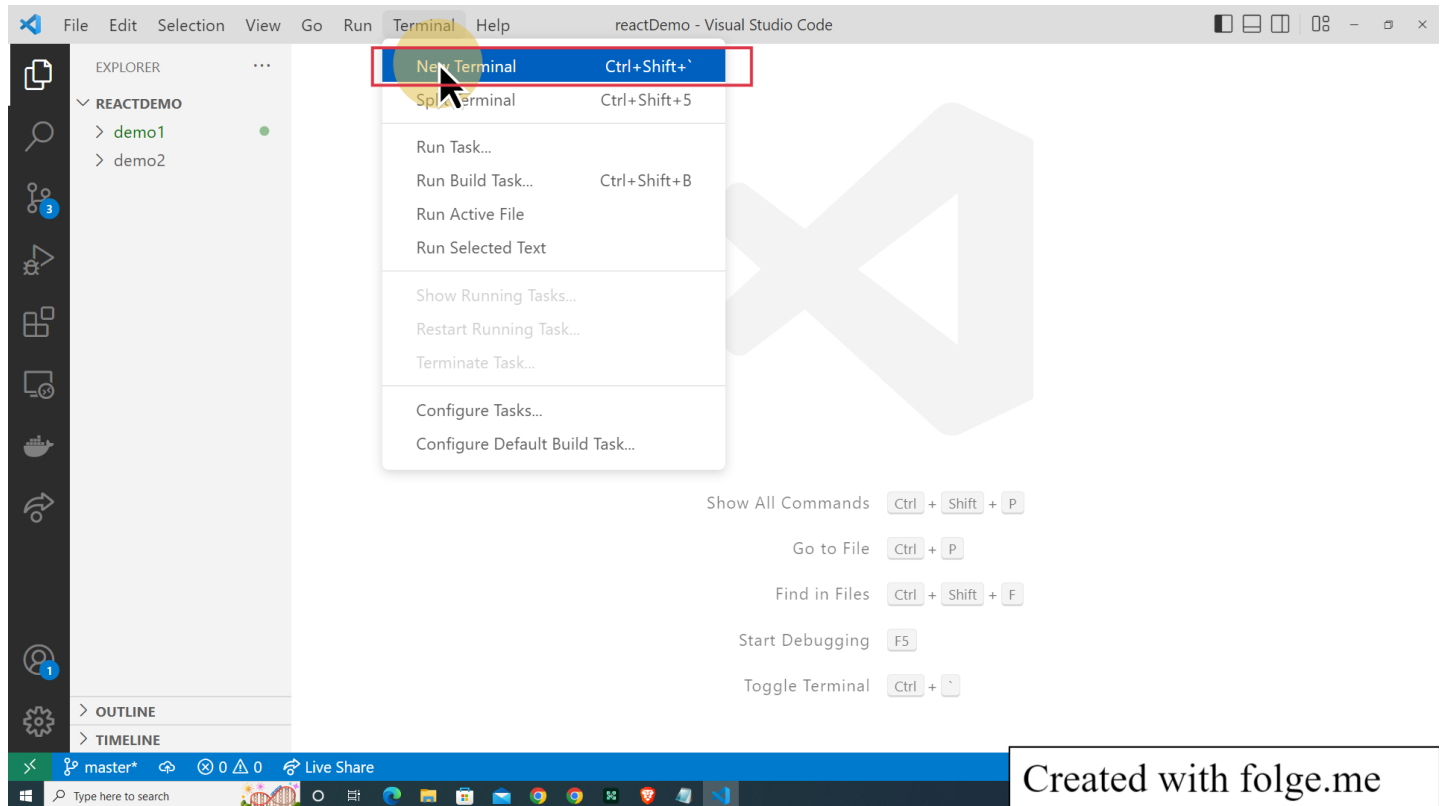

Select existing folder to work on or create new folder.

3. Open VSCode Terminal

Open new terminal in VSCode

Terminal > New Terminal

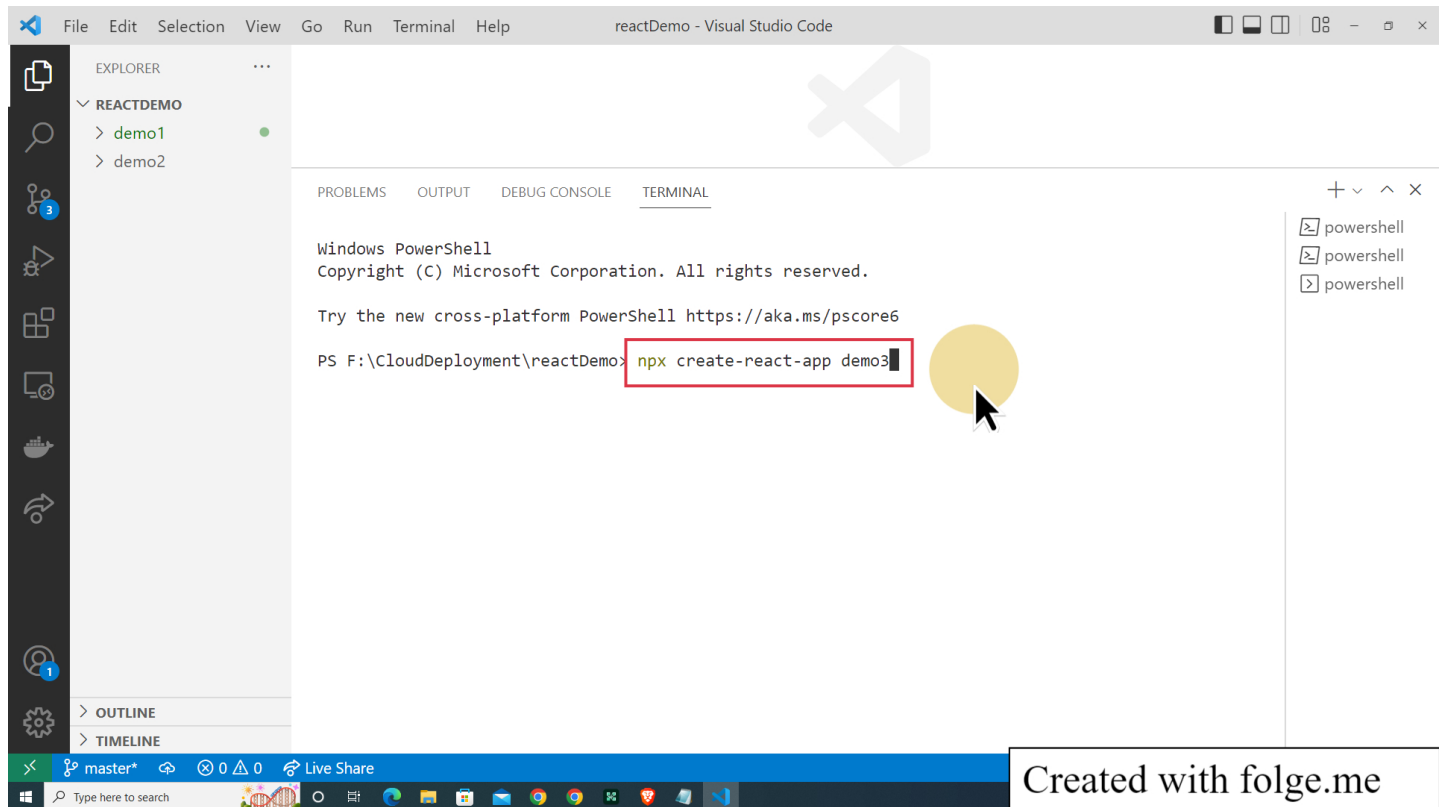

4. Create react app

Note : Node v14 above is required with npx installed.

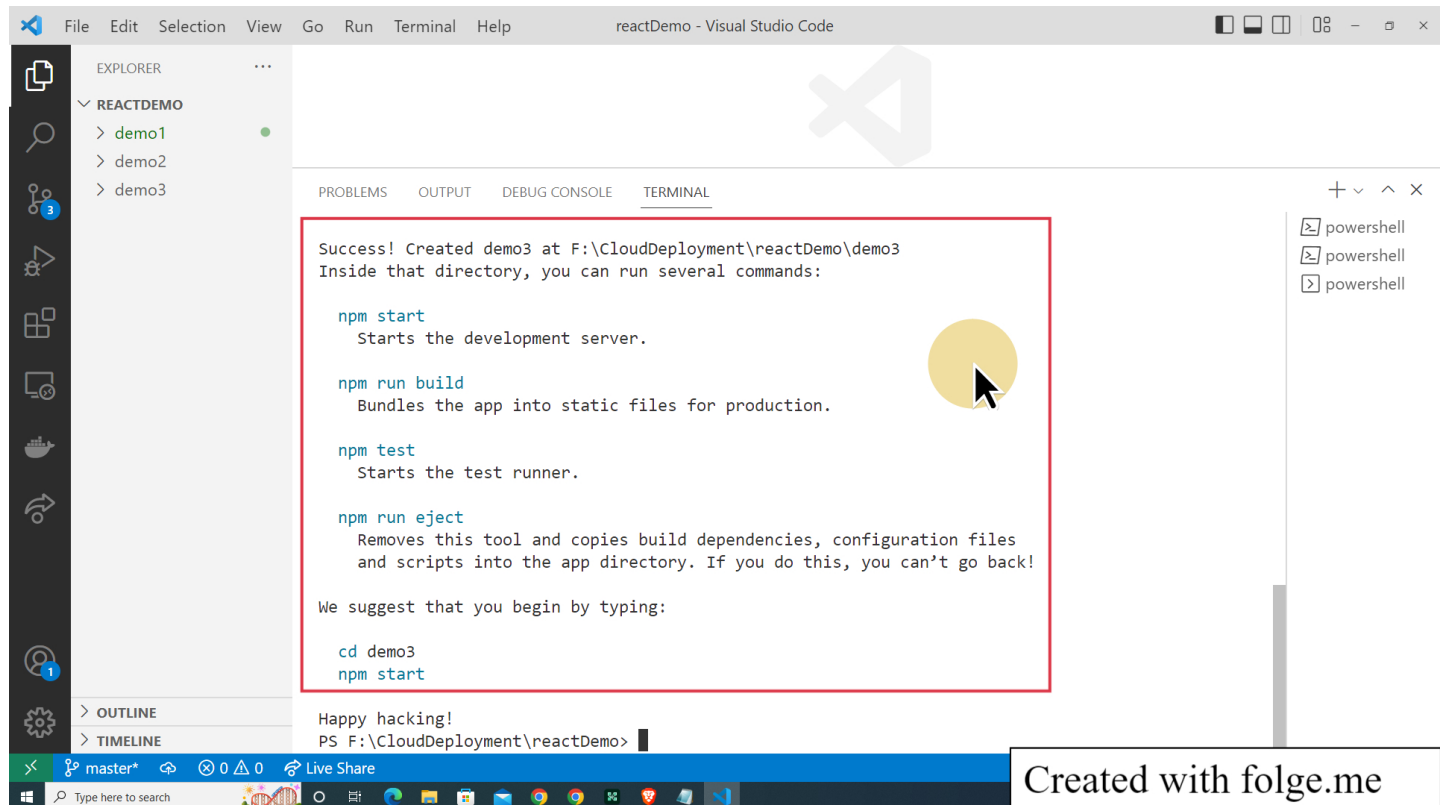

In terminal type :

```
npx create-react-app <Name of the app>
```

5. Done creating react app

You should see success message.

6. Run react app

Our react app name is "demo3"

Change the directory

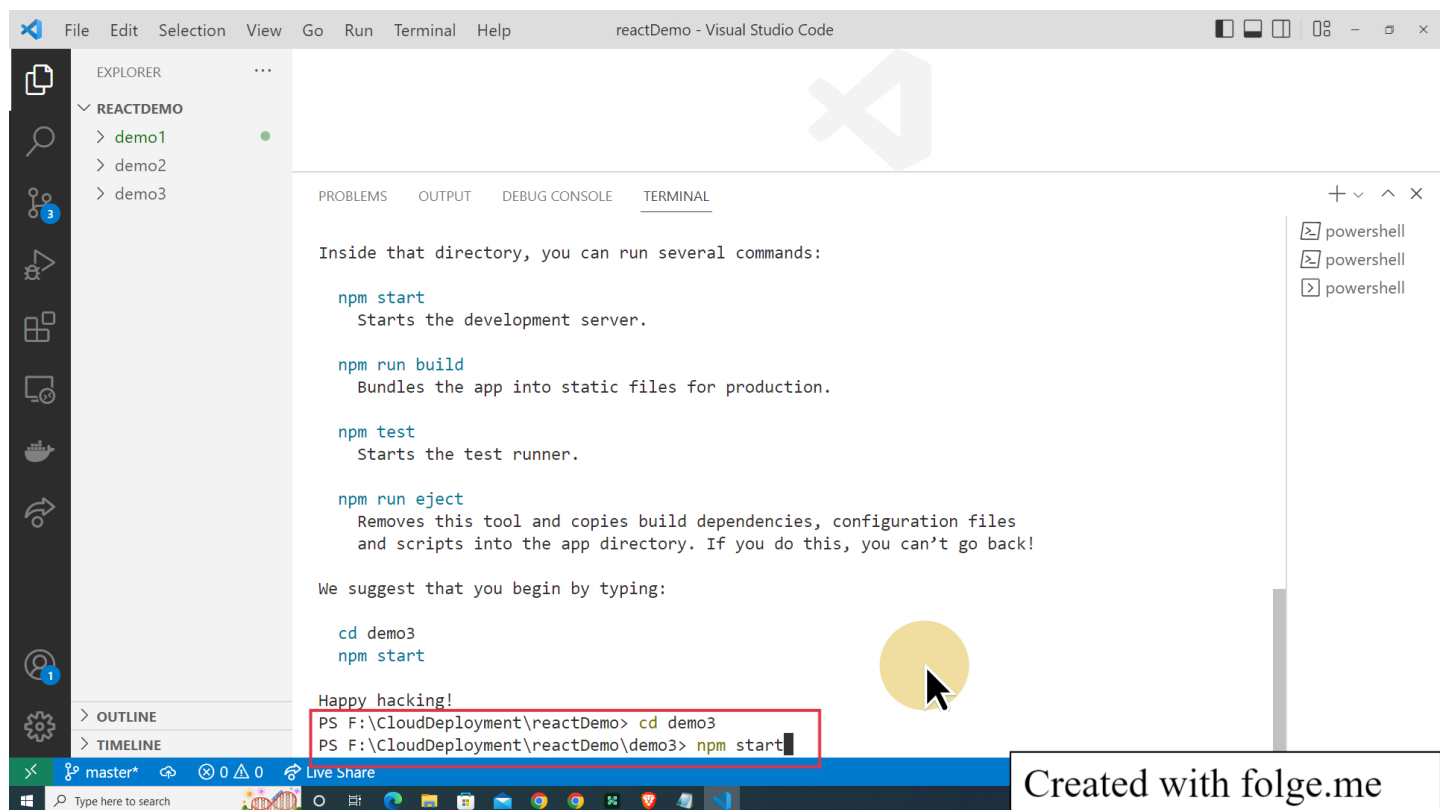

In terminal type:

```
cd demo3
```

Now start the dev server to run react app

In terminal type:

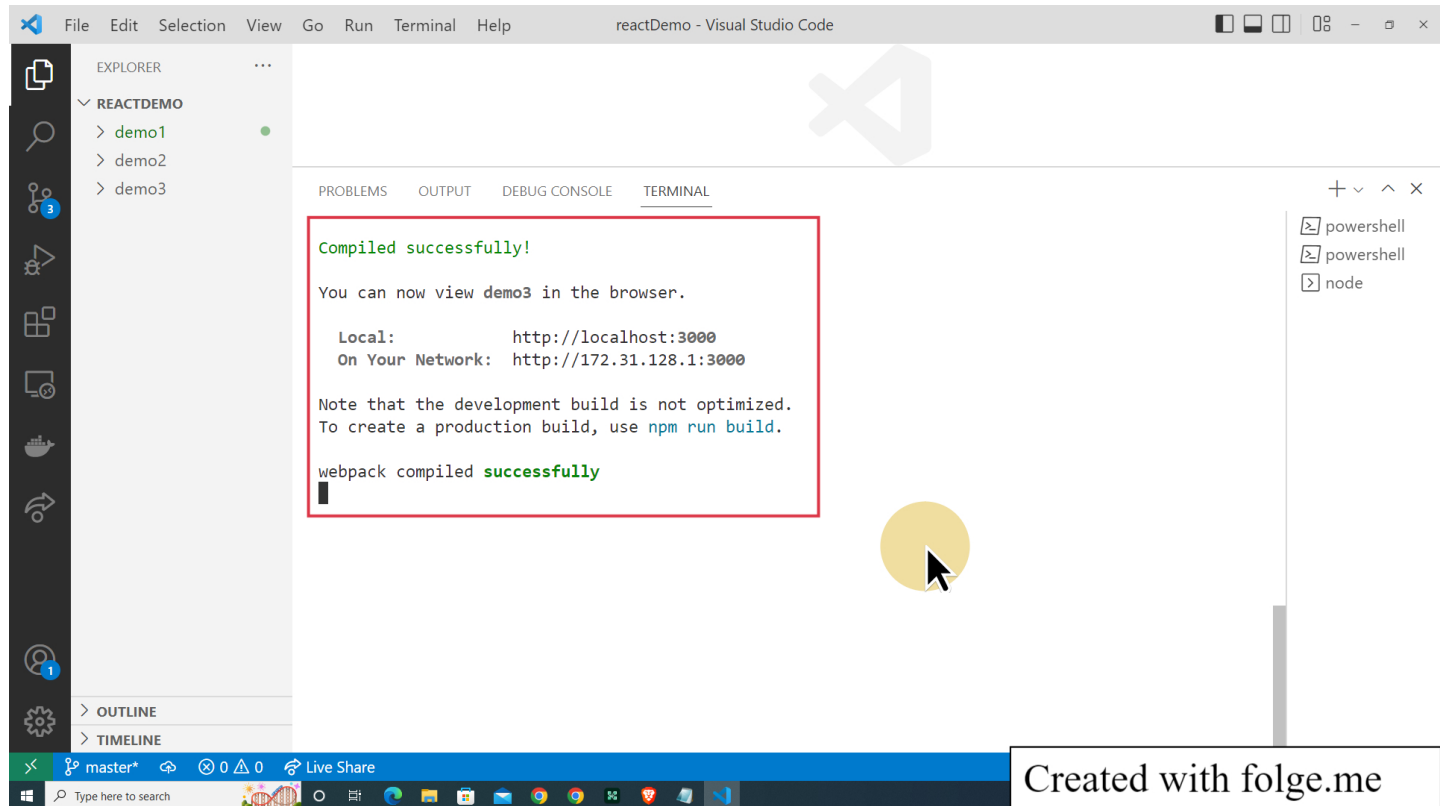

```
npm start
```

7. React App compiled successfully

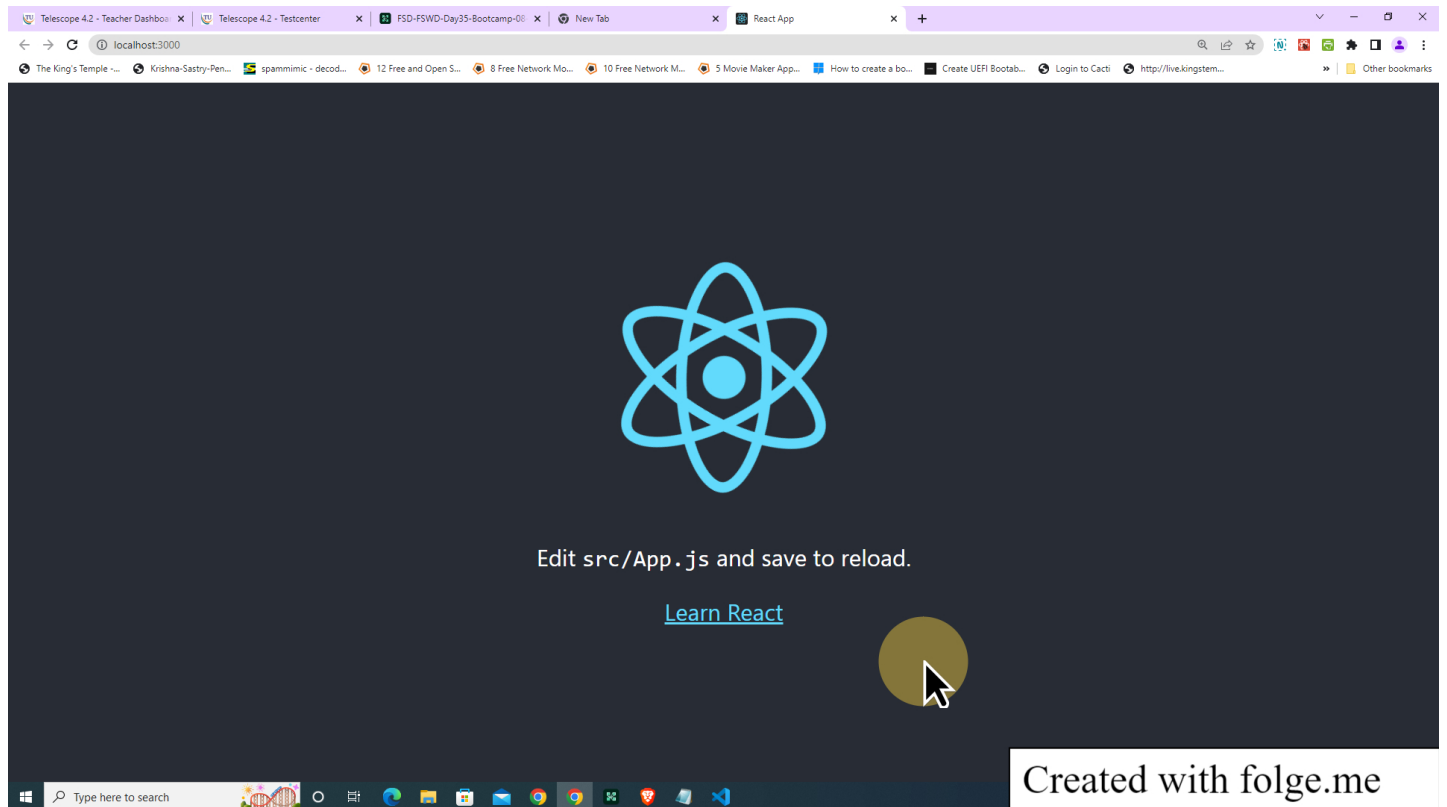

Webpack compiled js files successfully and created URL to navigate from browser to :

`http://localhost:3000`

8. React App

Output of the react app.

9. Stop the dev server

To stop the dev server press keys

`ctrl + c`

And,

In terminal type:

`Y`
